Table of Contents

• Introduction

In this we are going to building a responsive hotel booking website using html and css.

Context:

We are hired to develop and design responsive hotel booking website. This website is specially designed for Pakistan in which you can book any hotel all over the Pakistan and also you can compare the prices of different hotel and their ratings.

Problem:

As we see that nowdays if we wanna a travel or set a trip to other city and we wanna stay in a hottel we dont know about the hotels of that city and prices of differnet hotels so in our website we solve that problem .

Response:

This website is specially designed for in which you can book any hotel all over the Pakistan and also you can compare the prices of different hotel and their ratings. It can also show the discounts on the hotel and you can avail it from this website without facing any problems .

• The Problem

The problem which can occurs is that how we can add hotels in this beacause there are many hotels in different cities there we might face little problems to add all of them . Moreover, the other problem is that how we make the comparison or on which comparasion we will place the rooms/hotels.

• Project Goals and Objectives

Our goal is that we see that nowdays if we wanna a travel or set a trip to other city and we wanna stay in a hotel we dont know about the hotels of that city and prices of differnet hotels so in our website we solve that problem . In this we gather a multiple hotels with the different prices depend on the hotels and also catageorize the different rooms according to their standards e.g basic, luxary, royal suit etc with the differnt prices which are depend on the type

of room,hotel an city , so there the customer can easily pick the hotel and a room according to their need. He can also choose multiple rooms.

Our objective is to provide the quality of service rooms and make ease for a customer if he was travelling to the other city , he can easily find the place according to his recquirement.

• The Solution

Too solve the add problem we set the advertisement first three months free of cost in which different hotels from different cities can contact snd their room pictures (basic, luxary, royal suit etc) with the price and contct information etc , if someone can visit that hotel via our website then our website cannot charge from the hotel first three months. By this we can add the hotels. Moreover to solve the comparison problem we solve it by rating we set a rating/comment option below the every hotel so that the person who was stay can left their review and we can sort the hotels according to their rating.

• Project Scope

 Scope of that project is that it can to provide the quality of service rooms and make ease for a customer if he was travelling to the other city , he can easily find the place according to his recquirement. He don't have to worry if he is traveling and he don't know about the place their hotels etc. He don't have to rush to find their living.

• Roles and Responsibilities

Roles and responsibilities of project .The following table can be used as a template:

Role	Responsibilities	Participant(s)
Project Leader	lead everyone in project	M. Muneeb Ishaq
Analysis	analysie the project	M. Sibtain
Design	designing the layout	Shahab Arshad
Implementation	implement the project	M. Muneeb
Testing	testing the project	Burair Ali Naqvi
Domain Experts	set the domain	M. Muneeb Ishaq

Appendices:

We are hired to develop and design responsive hotel booking website. This website is specially designed for Pakistan in which you can book any hotel all over the Pakistan and also you can compare the prices of different hotel and their ratings. It can also show the discounts on the hotel and you can avail it from this website without facing any problems .In the case of any problem of visiting you also contact us through message .
